Sample report: S3_GSE281305_mix2

AstroGenetics: the physics of methylation, read on one sample

Specimen constructed DNA mixture · platform EPIC

SHOWCASE, OUTSIDE THE COMMISSIONED SCOPE: a DNA mixture of nine cell types, including two cultured cell lines, fibroblasts and endothelial cells (GSE281305). The IAM-Deconvolver is commissioned on blood-cell shares; this shows what it reports on cells it was not built for. Not a clinical result.

Research use only. Not a diagnostic test. Each reading is printed with its commissioning status: *commissioned* means it passed a test sealed before its data was seen; a reading outside what an instrument was tested on is still shown, and says so. The full technical record (intake, calibration, tare, noise gate, safeguards, integrity, and how to run it yourself) is in the HTML report.

The readings, in plain words

Each gauge runs from 0, the floor (below it a cell can no longer hold its identity), through 1, healthy, to saturation, the most the scale can register. Healthy cells sit in the green band around 1. Moving right means the marks are being lost.

Which cells are in the sample

CD4 T cells 45 %, B cells 22 %, NK cells 16 %, Neutrophils 15 %, read against the 79-cell IAM-Atlas v2.1.

Met-A

No reading on this sample: the array's own noise check could not confirm it was clean enough to read, so Met-A held back rather than guess.

C-Score

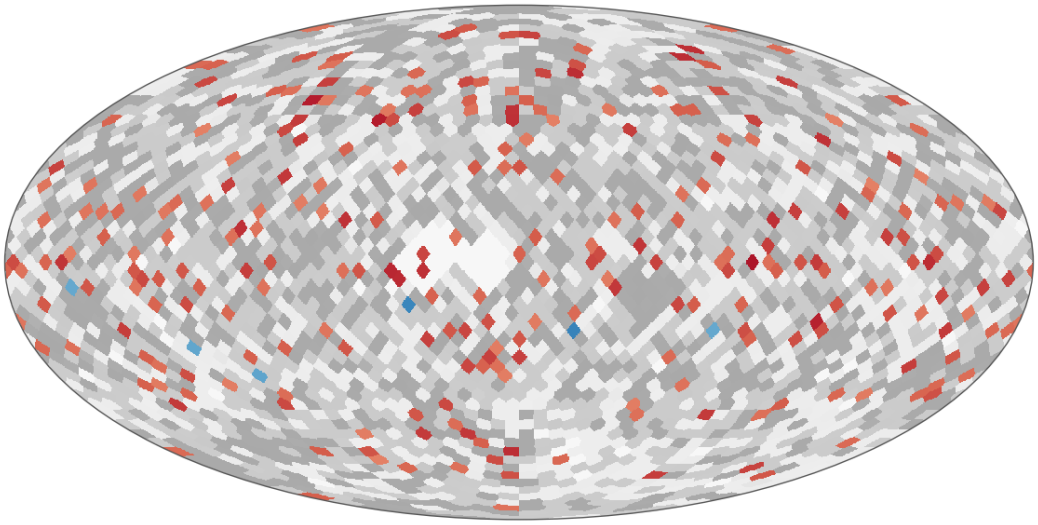

C-Score · constructed DNA mixture · not tared: no reading on the band

Whether the changes are scattered, as in healthy cells, or clustered along the genome.

The sample on the sphere

What changed: this sample laid over healthy neutrophils

matches healthy (grey shade: the healthy cell's tagging)
more disorder than healthy: pattern lost (beyond +2 of its own spread)
more order than healthy (beyond −2)

C-score 1.16 · 266 of 3062 pixels changed

Each point is one place in the genome. Grey means the same as a healthy cell. Color means different: a few scattered colored points are ordinary; colored patches mean the changes are bunched together along the genome.
