Sample report: S6_AK0005_buffy_coat_EPICv2

AstroGenetics: the physics of methylation, read on one sample

Specimen buffy coat · platform EPIC_v2

Research use only. Not a diagnostic test. Each reading is printed with its commissioning status: *commissioned* means it passed a test sealed before its data was seen; a reading outside what an instrument was tested on is still shown, and says so. The full technical record (intake, calibration, tare, noise gate, safeguards, integrity, and how to run it yourself) is in the HTML report.

The readings, in plain words

Each gauge runs from 0, the floor (below it a cell can no longer hold its identity), through 1, healthy, to saturation, the most the scale can register. Healthy cells sit in the green band around 1. Moving right means the marks are being lost.
