a
Qubit gauge: transmon worked example
6.2e-4
10.0
transmon
5 GHz, 35 mK
$10^{-4}$ $10^{-3}$ $10^{-2}$ $10^{-1}$ $10^{0}$ $10^{1}$ $10^{2}$
reading $A = \varepsilon/\varepsilon_{\text{device}}$ (device as built $= 1$)
b
$\varepsilon = -\ln(1-p)$ equals $p$ to $p/2$
$(\varepsilon - p)/p$ (%)
$10^{1}$ $10^{0}$ $10^{-1}$ $10^{-2}$ $10^{-3}$
$p = 10^{-2}$
$10^{-5}$ $10^{-4}$ $10^{-3}$ $10^{-2}$ $10^{-1}$
two-qubit error $p_{2Q}$
